

DART Laptop Compatibility Guide

- In putting together the Compatibility and Non-Compatibility Guides, FINSix has done its best to determine laptop compatibility with the Dart. We ask that customers verify compatibility by using the following criteria: The Dart works with laptops that have a voltage of 18 - 21V AND a power level of ≤65 watts. You can check the rating of your laptop and/or laptop adapter in the small label printed on the bottom of the unit. If the power level is not provided, multiply the voltage (V) by the current (Amps) and make sure this number is ≤65 (watts). **Note:** Make sure to use the INPUT voltage/current on the laptop label and/or the OUTPUT voltage/current on the adapter label.
- Some laptop models can use different wattage power adapters depending on the graphics card used. Discrete video cards will draw more power, potentially requiring a more potent power supply. For example, a laptop that has integrated graphics might use a 65 watt power adapter, but if it has discrete graphics, it could require a 90 watt power adapter. Please keep this in mind when assessing compatibility with the 65 watt Dart.
- If you don't see your laptop listed on either the Compatibility or Non-Compatibility Guides, or if you have any questions, please contact us at info@finsix.com
